## Building Blocks of Vascular Access

### June 10, 2015

This course is inspired by the patients and families whose lives momentarily gave us fresh perspectives about life but unforgettably touched ours that we now strive to provide optimal care for those who have vascular access devices

We encourage front line nursing staff to register for this course to deepen your knowledge and skills in managing patients with vascular access devices.

Our goal is to provide attendees with evidence-based foundation essential to proper management of these devices

This course includes management of peripheral IV, midlines PICCs, non-tunneled and tunneled central venous catheters and implanted venous ports

### Course Objectives

Identify the different types of vascular access devices (VADs)

Discuss the advantages and disadvantages of each device

Explain importance of vein preservation concepts in vascular access

Demonstrate the proper technique in declotting occluded VADs

Evaluate effectiveness of interventions in troubleshooting VADs

## Faculty

She is one of the leading minds in the vascular access industry education whose passion for the specialty is evident in her lectures. She is a past president of the Association of Vascular Access (AVA) and has lectured extensively in the national and international stages

**Nadine Nakazawa, BS, RN, OCN, VA-BC**
